-

Languages

- **Knowledgeable in:** Python, HTML, CSS, and JavaScript
 - **Familiar with:** SQL, PHP, Linux
 - **Learning:** C, C++, and Swift
-

Projects

Superbowl Boxes Website

Uses python, HTML, and CSS, and JavaScript.

Completed

- This project demonstrates my knowledge of front-end development. Using a flask app, I created a website that reads an excel file and converts the data to a table in html. Then finds the winning boxes based on numbers entered with the excel sheet and displays them to the user. While using CSS and JavaScript to enhance user experience.

Virtual Closet

Uses python, SQL, HTML, and CSS

In development

- This project demonstrates my knowledge of back-end development, as well as front-end. This project allows the user to upload pictures of their clothes, then using an API the program removes the background of the image and stores the image to the database. The user then has different options to display their closet, with the ability to filter based on type of clothing. The user can also create outfits and save them to the database with the ability to display those completed outfits on another page.
-

Skills

- Knowledgeable in excel, building computers, and photoshop.
